Ricardo Ayala

Front-end Developer

ABOUT ME:

I currently work in the technical area of POS service at Geocom S.A, where I perform various tasks, with POS Testing being the main one.

These years in the IT sector have motivated me to reinvent myself and prepare in this field, with development being the area that excites me the most. For this reason, I have decided to enhance my skills through various development-related courses, and I would like to put the knowledge I've gained into practice while also gaining my first work experience in this field.
